- Gym Management System
- Reward Evaluation System with Integrated NLP Chatbot

CERTIFICATIONS

2024
Zend php developer

2025
HSK1

(Expected TOEIC test in September 2025)
TOEIC

CAREER OBJECTIVE

As a final-year Information Systems student, I aim to participate in an internship as a Business Analyst or Developer. I hope to gain experience in a professional environment, enhance my technical skills, and contribute to building practical solutions for businesses.

WORK EXPERIENCE

Agribank Tay Sai Gon Branch **08/2022 - 6/2025**

PART-TIME DATA ENTRY INTERN

- Entered and verified customer records in the internal document management system
- Ensured data accuracy and confidentiality
- Supported reviewing and organizing documents according to bank regulations

PROJECTS

Gym Management System

8/2024 - 12/2024

Business Analysis & System Development

Description:
The system supports both staff and customers in registering and renewing training packages, checking in, making online payments, receiving automated reminder emails, and managing services. It was developed using pure PHP with an HTML/CSS interface. Prior to development, the project focused on business analysis, including creating Use Case, Activity, and Sequence diagrams, as well as writing Test Cases to ensure accurate and efficient system operations.

Responsibilities:

- Business analysis: Use Case, Activity, Sequence Diagrams
- Database design, writing Test Cases and system specifications
- UI development using HTML/CSS
- Building basic functions with pure PHP

Technologies: PHP, HTML, CSS, MySQL

Commendation Approval System

12/2024 - 4/2025

Business Analysis & System Development

Description:
The system facilitates the registration, approval, and tracking of reward applications for lecturers and students at the Industrial University of Ho Chi Minh City. It was developed using PHP Laravel and

INTERESTS

- Watching movies
- Reading books
- Learning new things

integrates a chatbot built in Python. Data from PDF documents is extracted, cleaned, chunked, and embedded into a vector database. The chatbot uses the Retrieval-Augmented Generation (RAG) technique to retrieve relevant information and generate natural responses via the OpenAI API. Laravel communicates with the chatbot through API to receive and display the response on the user interface. Similar to the gym management system, the project emphasized business analysis, including the creation of Use Case, Activity, and Sequence diagrams, and the development of Test Cases to ensure precise and efficient system workflows.

Responsibilities:

- Business analysis: Use Case, Activity, Sequence Diagrams
- Writing Test Cases and system specifications
- Designing system architecture and API integration between Laravel and the chatbot
- Building the chatbot using Python, RAG technique, and OpenAI API

Technologies: PHP, HTML, CSS, MySQL, Laravel (PHP), Python, REST API, Docker, OpenAI API, Vector Database (ChromaDB)
